

GALVANIZED CHAIN LINK

- The chain link is made of woven wires forming diamond-shaped links of variable dimension. Manufactured with wire of a minimum strength of 400 N/mm². The rolls are provided with unrolling wire and paper protection.
- Tolerance of the diameter of the wire: 5-10%
- The chain link is suitable for parks, gardens or private properties in residential areas, rural areas, industrial areas, tennis courts, etc.

KNOTTED WIRE MESH

- The knotted wire mesh is made of rectangular knotted mesh, wire with triple galvanized protection (240gr Zn/m²), upper and lower diameter of 2,40mm and the rest of the wire has a diameter of 1,90mm. Variable distances between the vertical wires.

COATED CHAIN LINK

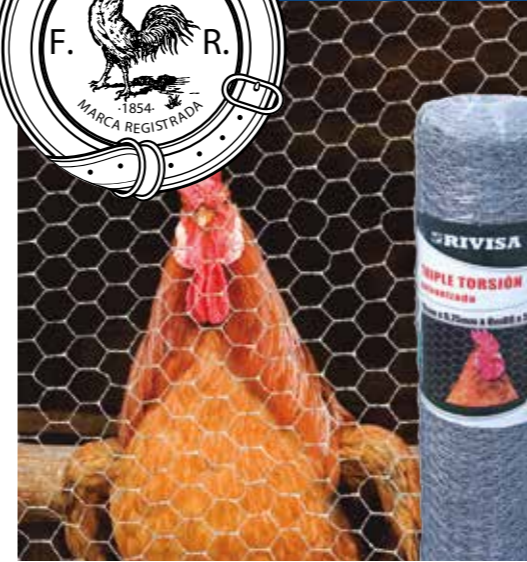

- The chain link is made of woven wires forming diamond-shaped links of variable dimension. Manufactured with wire of a minimum strength of 400 N/mm². The rolls are provided with unrolling wire and paper protection.
- Tolerance of the diameter of the wire: 5-10%
- The chain link is suitable for parks, gardens or private properties in residential areas, rural areas, industrial areas, tennis courts, etc.

HEXAGONAL WIRE MESH

- Hexagonal wire mesh made with galvanized wire.
- The hexagonal wire mesh is suitable for poultry farms, animal enclosures and do-it-yourself market.
- Tolerance of the diameter of the wire: 5-10%

COATED ELECTRO-WELDED MESH

- Orthogonal and plastic coated electrowelded mesh, manufactured with wires of strength 940 N/mm². At the upper part, the wires are closer together in order to make the mesh stiffer.
- Tolerance of the diameter of the wire: 5-10%
- The coated electro-welded mesh is suitable for parks, gardens or private properties in residential areas, rural areas, industrial areas, etc.

BARBED WIRE

- Barbed wire is made of two supporting wires onto which defensive spikes are knotted.
- Made from high-tensile wire, has a tensile strength (Rt)>900 N/mm².
- Indicated to close agricultural farms and as a complement to reinforce the security.
